

**Amendments to the Specification:**

*Please amend the paragraph (section) beginning on page 5, at line 3 as shown below:*

The outer skin 26 includes a first lip 34 that wraps around an end 38 of the first substrate 30 to position it thereto. The lip 34 helps secure the outer skin 26 to the first substrate 30 to limit the appearance of a gap between the outer skin 26 and the door 18. The first substrate 30 includes an angle flange 42 to tighten the armrest 14 to the door 18. The angled flange 42 enters through an opening 44 in the door panel during assembly. The angled flange 42 pulls on the first substrate 30 during insertion of the armrest 14 to force the armrest 14 against the door 18, thereby limiting gap formation between the outer skin 26 and the door panel 18. A fastener ~~[[46]]~~ 48 secures the angled flange 42 to the door panel 18.
